Also included are nucleic acids encoding the PRO proteins CC mentioned above, a vector comprising a PRO nucleic acid), a host cell CC comprising the vector and producing PRO, a chimaeric molecule comprising CC PRO fused to a heterologous amino acid sequence, and an anti-PRO CC antibody. PRO37 polypeptide is useful for detecting a PRO4993 polypeptide is useful for detecting a PRO4993 polypeptide is useful for detecting PRO377 polypeptide. PRO725, PRO700 or PRO739 polypeptide is useful for detecting PRO337 polypeptide. PRO725, PRO700 or PRO739 polypeptide is useful for detecting PRO337 polypeptide is useful for detecting PRO337 polypeptide. PRO735, PRO700 or PRO739 polypeptide is useful for Inking a CC bloactive molecule to a cell expressing PRO337 polypeptide is useful for Inking a CC bloactive molecule to a cell expressing PRO4993 polypeptide. The bloactive molecule to a cell expressing PRO4993 polypeptide; and PRO4993 polypeptide is useful for Inking a CC useful for Inking a bloactive molecule to a cell expressing PRO4993 polypeptide or anti-PRO375. CC PRO700 or PRO739 polypeptide pRO4993 polypeptide or anti-PRO377 CC polypeptide is useful for modulating at least one biological activity of the cell expressing PRO4993 polypeptide or anti-PRO377 CC polypeptide; pRO4993 polypeptide is useful for modulating the cell expressing PRO397 polypeptide is useful for modulating the pro4993 polypeptide; pRO725, CC PRO700 or PRO739 polypeptide or anti-PRO397 polypeptide or anti-PRO397 polypeptide or anti-PRO397 polypeptide is useful for modulating the cell expressing PRO1559 polypeptide; pRO725, CC pRO700 or PRO739 polypeptide or anti-PRO393 polypeptide; pRO725, CC prof10 propetide is useful for modulating the cell expressing PRO1559 polypeptide; pRO725, CC prof10 propetide is useful for modulating the pros25, prof10 propetide is useful for modulating the prof10 prof
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       र्
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to an isolated PRO polypeptide (secreted or transmembrane protein) having at least 80% amino acid sequence identity to an amino acid sequence chosen from 94 fully defined sequences as given in the specification (including PRO lacking its associated signal peptide). Also included are nucleic acids encoding the PRO proteins mentioned above, a vector comprising a PRO nucleic acid), a host cell comprising the vector and producing PRO, a chimaeric molecule comprising PRO fused to a heterologous amino acid sequence, and an anti-PRO antibody. PRO337 polypeptide is useful for detecting a PRO4993 polypeptide in useful for detecting a PRO4993 polypeptide is useful for detecting a PRO4993 polypeptide is useful for detecting a PRO4993 polypeptide.
                                                                                                                                                                                                      Human; secreted and transmembrane protein; PRO; virucide; gene therapy; cell death; growth induction cascade; blood coagulation cascade; viral infection; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New isolated PRO polypeptide e.g. PRO200, PRO322, PRO540, PRO617 polypeptide, useful for treating sight loss due to pigmentosum by enhancing retinal neural cells survival.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 WPI;
                                                                                                                                                                                                                                                                  Secreted and transmembrane protein associated oligonucleotide #200
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Example

                                                                          CC comprise variable and non-variable regions. The capture ollogonucleotides comprises variable anchor region, the complement of which is present at CC least once in each nucleic acid and a 3'-variable, discriminatory region CC that comprises all possible combinations of up to 10 nucleotides to allow thin in gresent at CC agents are particularly locked nucleic acids (LNA) and the anchor region CC comprises a sequence of 10-50, particularly 15-25, T residues. The capture CC capture oligonucleotides are biotinylated and immobilised on a surface by citeraction with streptavidin. The matrix is of plastic, ceramic, glass, CC metal, resin, gel, crystalline material and/or membrane, having semi-CC is particularly a layer of (bio)molecular filaments and binding of single stranded nucleic acids to the surface is (quasi)covalent, supramolecular, CC physical, stimulated by an electrical field or through a molecular sieve. The method is used (i) for analysis of patterns, especially in mucosal, carids to the surface is (quasi)covalent, supramolecular, CC hair root, blood, nerve or germ cells and (ii) for determining the cacids (amino, carboxylic or fatty acid) or their derivatives, salts and CC anditives or supplements, especially minerals, trace elements, organic cacids (amino, carboxylic or fatty acid) or their derivatives, salts and CC andetect very small differences in pools of nucleic acid from cells. It can be not on the nucleic acid pool. Since the method is based on comparison of nucleic acid pools, not individual compens, matrix miniaturisation is possible. ABX01281-ABX01344 represent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This invention describes a novel method for sorting single-stranded nucleic acids by isolation and hybridisation of nucleic acid pools, then reading out, where the nucleic acids are selectively bound using capture agents that are (a) immobilised on the surface of a solid matrix and (b)

comprise variable and non-variable regions. The capture oligonucleotides comprise variable and non-variable regions that capture oligonucleotides chave a 5'-invariable anchor region, the complement of which is present at CC least once in each nucleic acid and a 3'-variable, discriminatory region that comprises all possible combinations of up to 10 nucleotides to allow binding of particular sorts of single stranded nucleic acids. The capture comprises a sequence of 10-50, particularly 15-25, T residues. The capture comprises a sequence of 10-50, particularly 15-25, T residues. The capture comprises a sequence of 10-50, particularly 15-25, T residues. The capture conducting properties and especially in the form of a chip. Its surface is particularly a layer of (bio)molecular filaments and binding of single stranded nucleic acids to the surface is (quasi)covalent, supramolecular, conducting properties and especially in the form of a chip. Its surface is particularly a layer of (bio)molecular field or through a molecular single stranded nucleic acids to the surface is (quasi)covalent, supramolecular, comparticularly a layer of (bio)molecular field or through a molecular sieve. The method is used (i) for analysis of patterns, especially in nucosal, carditures or supplements, especially minerals, trace elements, organic acids (amino, carboxylic or fatty acid) or their derivatives, salts and carditures. The method provides rapid, inexpensive and reproducible card detect very small differences in pools of nucleic acids from cells. It can detect very small differences in the mucleic acids from cells. It can detect very small differences in the mucleic acids from cells. It can detect very small differences in the mucleic acids from cells. It can detect very small differences in the mucleic acids from cells. It can detect very small differences in the mucleic acids from cells. It can detect very small differences in the mucleic acid pools. Since the comparison of nucleic acid pools, not individual captures and capture pro
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This invention describes a novel method for sorting single-stranded nucleic acids by isolation and hybridisation of nucleic acid pools, then reading out, where the nucleic acids are selectively bound using capture agents that are (a) immobilised on the surface of a solid matrix and (b)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sorting single-stranded nucleic acid, useful for analyzing expression patterns and screening active agents, uses capture agent with variable

The capture agents are particularly locked nucleic acids (INA) and the anchor region CC capture oligonucleotides are biotinylated and immobilised on a surface by interaction with streptavidin. The matrix is of plastic, ceramic, glass, CC endutting properties and especially in the form of a chip. Its surface by cranded nucleic acids (INA) and binding of single stranded nucleic acids to the surface is (quasi) covalent, supramolecular, CC physical, stimulated by an electrical field or through a molecular sieve. The method is used (i) for analysis of patterns, especially in mucosal, hair root, blood, nerve or germ cells and (ii) for determining the acids (amino, carboxylic or fatty acid) or their derivatives, salts and CC anditives or supplements, especially minerals, trace elements organic acids (amino, carboxylic or fatty acid) or their derivatives, salts and CC anide (ii) the method provides rapid, inexpensive and reproducible control of the complete spattern of all nucleic acid in a cell, and CC andetect very small differences in the nucleic acid pool. Since the method is based on comparison of nucleic acid pools, not individual content on the uncleic acid pools of in the method of the heathod of t

                                                                                                                                                                                                                                                                                                                                                                                         This invention describes a novel method for sorting single-stranded convector acids by isolation and hybridisation of nucleic acid pools, then capture that are (a) immobilised on the surface of a solid matrix and (b) comprise variable and non-variable regions. The capture oligonucleotides have a 5'-invariable anchor region, the complement of which is present at cleast once in each nucleic acid and a 3'-variable, discriminatory region that comprises all possible combinations of up to 10 nucleotides to allow binding of particulary locked nucleic acids (LNA) and the anchor region comprises a sequence of 10-50, particularly 15-25, T residues. The capture comprises a sequence of 10-50, particularly 15-25, T residues. The conducting properties and especially in the form of a chip. Its surface by interaction with streptswidin. The matrix is of plastic, ceramic, glass, conducting properties and especially in the form of a chip. Its surface is particularly a layer of (bio)molecular filaments and binding of single stranded nucleic acids to the surface is (quasi)covalent, supramolecular, by stimulated by an electrical field or through a molecular sieve. The method is used (i) for analysis of patterns, especially in mucosal, hair root, blood, nerve or germ cells and (ii) for determining the activity of pharmaceuticals and/or nutritional compounds, e.g. food additives or supplements, especially minerals, trace elements, organic acids (and the complete pattern of all nucleic acid from cells. It allows imaging of the complete pattern of all nucleic acid in a cell, and can detect very small differences in the nucleic acid gool. Since the method is based on comparison of nucleic acid pools, not individual capture probes used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                              5

Computes variable and non-variable anchor regions. The complement of which is present at the act of the comprises all possible combinations of which is present at that comprises all possible combinations of which is present at that comprises all possible combinations of the control of which is present at the comprises all possible combinations of the control of which is present at the comprises are particular sorts of single stranded nucleic acids. The capture obiginucleotides are particularly locked nucleic acids (LMA) and the anchor region of comprises a sequence of 10-50, particularly 15-25, T residues. The composition with streptavidin. The matrix is of plastic, ceramic, glass, or metal, resin, gel, crystalline material and/or membrane, having semicants. The conducting properties and especially in the form of a chip. Its surface by the stranded nucleic acids to the surface is (quasi) covalent, supramolecular, the method is used (i) for analysis of patterns, especially in mucosal, the method is used (i) for analysis of patterns, especially in mucosal, that root, blood, nerve or germ cells and (ii) for determining the cation of the provides rapid, inexpensive and reproducible cations (maximum strate) and compounds, e.g. food cativity of pharmaceuticals and/or nutritional compounds. E.g. food cativity of pharmaceuticals and/or nutritional compounds, e.g. food cativity of pharmaceuticals and/or nutritional compounds. E.g. for a country to be compounded to the method provides rapid, inexpensive and reproducible cation is based on comparison of nucleic acid pool. Since the method compounds e.g. for the invention.
                                                                                       Matches.

DNA microarray capture oligonucleotide #35

```
This invention describes a novel method for sorting single-stranded connection acids by isolation and hybridisation of nucleic acid pools, then comparise that are (a) immobilised on the surface of a solid matrix and (b) comprise variable and non-variable regions. The capture oligonuclectides have a 5'-invariable anchor region, the complement of which is present at cleast once in each nucleic acid and a 3'-variable, discriminatory region that comprises all possible combinations of up to 10 nucleotides to allow binding of particularly locked nucleic acids (LNA) and the anchor region comprises a sequence of 10-50, particularly 15-25, T residues. The capture comprises a sequence of 10-50, particularly 15-25, T residues. The conducting properties and especially in the form of a chip. Its surface by interaction with streptavidin. The matrix is of plastic, ceramic, glass, conducting properties and especially in the form of a chip. Its surface is particularly a layer of (bio)molecular filaments and binding of single stranded nucleic acids to the surface is (quasi) covalent, supramolecular, stimulated by an electrical field or through a molecular sieve. The method is used (i) for analysis of patterns, especially in mucosal, having semicaciditives or supplements, especially minerals, trace elements, organic acids (amino, carboxylic or fatty acid) or their derivatives, salts and cardives or supplements, especially minerals, trace elements, organic acids (amino, carboxylic or fatty acid) or their derivatives, salts and can detect very small differences in pools of nucleic acids from cells. It can detect very small differences in the mucleic acid gool. Since the method is based on comparison of nucleic acid pools, not individual capture probes used in the method of the invention.

                                                                                                This invention describes a novel method for sorting single-stranded concluded acids by isolation and hybridisation of nucleic acid pools, then comprise variable the nucleic acids are selectively bound using capture comprise that are (a) immobilised on the surface of a solid matrix and (b) comprise variable and non-variable regions. The capture oligonucleotides have a 5'-invariable anchor region, the complement of which is present at cell least once in each nucleic acid and a 3'-variable, discriminatory region comprises all possible combinations of up to 10 nucleotides to allow binding of particular sorts of single stranded nucleic acids. The capture agents are particularly locked nucleic acids (LNA) and the anchor region comprises a sequence of 10-50, particularly 15-25, T residues. The capture of interaction with streptavidin. The matrix is of plastic, ceramic, glass, crystalline material and/or membrane, having semiconducting properties and especially in the form of a chip. Its surface is particularly a layer of (bio)molecular filaments and binding of single stranded nucleic acids to the surface is (quasi) covalent, supramolecular, cpinysical, stimulated by an electrical field or through a molecular sieve. The method is used (1) for analysis of patterns, especially in mucosal, carefures. The method provides rapid, inexpensive and reproducible caids (amino, carboxylic or fatty acid) or their derivatives, salts and caids (amino, carboxylic or fatty acid) or their derivatives, salts and can detect very small differences in the nucleic acid pool. Since the method is based on comparison of nucleic acid pools, not individual genes, matrix more also in the special cacid pools. Anxional represent

CC includes an opening for receiving the carrier and is optically contained in the region of the detection surface. The carrier is made cf fransparent in the region of the detection surface. The carrier is made cf of glass and/or silicon and the vessel is made of glass (optionally content plastics), glass ceramic, plastics or metal. Probes are cc present in a substance library, especially proteins (e.g. antibodies, creceptors and/or membrane proteins), peptides (receptor ligands, cc pharmaceutically active peptides and/or hormones) or nucleic acids (DNA cc pharmaceutically active peptides and/or hormones) or nucleic acids (DNA cc pharmaceutically active peptides and/or hormones) or nucleic acids (DNA cc coupled device or CMOS camera, optionally fitted with an optical read-out system. The device may include a light source that ensures homogeneous colliumination of the carrier, especially an array of diffusely irradiating cources that are superimposed. These sources are lasers, LED, plane cc radiators or high-pressure lamps and the cover of the reaction vessel is structured to ensure homogeneous illumination. The system preferably also cc semipermeable, mirror between light sources and the carrier, a cc temperature control unit and a computer that collects signal intensities cf from the detector and converts them to an analogue image. The reaction vessels are arranged for sequential examination. Target molecules are contacted are arranged for sequential examination. Target molecules are contacted with examination and another conventional labels.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This invention describes a novel reaction vessel for detecting specific interactions between molecular targets and probe molecules comprising a laboratory reaction vessel (tube) that has, on its base, a carrier on
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Schulz
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  detection; probe; microarray; hybridisation; cyp2D6; human; cytochrome-P450; ss; PCR; primer.
    with probes and any interaction detected, e.g. from conventional labels but most preferably the interaction results in precipitation on the arra of probes and the time progression of precipitation is detected as a signal intensity. Particularly a soluble precursor is converted into a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Example 2; Page 21; 38pp; German.

The new vessel is used as a component in a device for performing microarray tests, i.e. interaction of a target with protein, peptide or nucleic acid probes, e.g. for biomedical, including hybridisation or immunological, tests. The reaction vessel is of simple construction, is easy and inexpensive to make and is compatible with other laboratory apparatus (e.g. bench centrifuges and pipettes). Micro-array tests can be performed in a single vessel, reducing the risk of contamination and only relatively simple detectors are required. ADJ99048-ADJ99087 represent probes used to detect the cyp2D6 gene which the inventor.

Ct transmembrane protein) having at least 80% amino acid sequence dentity
Ct to an amino acid sequence chosen from 94 fully defined sequences as given
Cc in the specification (including PRO lacking its associated signal
Cc peptide). Also included are mucleic acids encoding the PRO proteins
Cc mentioned above, a vector comprising a PRO nucleic acid). A host cell
Cc comprising the vector and producing PRO, a chimaeric molecule comprising
CC pRO fused to a heterologous amino acid sequence, and an anti-PRO
CC antibody. PRO337 polypeptide is useful for detecting a PRO4939
CC polypeptide in a sample suspected of containing PRO4993 polypeptide.
CC Similarly, PRO4993 polypeptide is useful for detecting PRO397
CC polypeptide pro725, PRO700 or PRO739 polypeptide is useful for detecting
CC pRO725, PRO700 or PRO739 polypeptide is useful for detecting
CC pRO725, PRO700 or PRO739 polypeptide is useful for detecting
CC pRO725, PRO700 or PRO739 polypeptide is useful for linking a
CC pale at the toxin, radiolabel, or an antibody. The bioactive molecule to a cell expressing PRO493 polypeptide;
CC causes death of the cell. PRO337 polypeptide;
CC pRO700 or PRO739 polypeptide are useful for linking a bioactive molecule
CC causes death of the cell. PRO337 polypeptide;
CC pro700 or PRO739 polypeptide are useful for linking a bioactive molecule
CC causes death of the cell. PRO337 polypeptide;
CC pro700 or PRO739 polypeptide are useful for linking a bioactive molecule
CC causes death of the cell. PRO337 polypeptide;
CC pro700 or PRO739 polypeptide is useful for modulating at least one biological activity of
CC pro700 or PRO739 polypeptide. PRO735,
CC pro700 or PRO739 polypeptide, where the cell is killed. PRO337
CC polypeptide or anti-PRO337 polypeptide;
CC modulating the biological activity of
CC modulating the biological activity of the cell expressing PRO7493 polypeptide;
CC pro709 polypeptide is useful for modulating the pro80159
CC pro709 polypeptide is useful for modulating the pro80159
CC pro709 polypeptide is useful for modulat

                                                                                                                                                 The invention relates to an isolated PRO polypeptide (secreted or transmembrane protein) having at least 80% amino acid sequence identity to an amino acid sequence chosen from 94 fully defined sequences as given in the specification (including PRO lacking its associated signal peptide, a PRO extracellular domain with or without its associated signal peptide). Also included are nucleic acids encoding the PRO proteins mentioned above, a vector comprising a PRO nucleic acid), a host cell comprising the vector and producing PRO, a chimaeric molecule comprising PRO fused to a heterologous amino acid sequence, and an anti-PRO antibody. PRO337 polypeptide is useful for detecting a PRO493 polypeptide in useful for detecting PRO493 polypeptide. Similarly, PRO493 polypeptide is useful for detecting PRO493 polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                        Ashkenazi AJ, Baker KP, Botstein D, Desnoyers L, Eaton DL; Ferrara N, Filvaroff E, Fong S, Gao W, Gerber H, Gerritsen ME; Goddard A, Godowski PJ, Grimaldi JC, Gurney AL, Hillan KJ; Kljavin IJ, Kuo SS, Napier MA, Pan J, Paoni NF, Roy MA, Shelt Stewart TA, Tumas D, Williams PM, Wood WI;
                                                                                                                                                                                                                                                                                                                                    New PRO nucleic acid, useful for treating e.g. osteoarthritis, rheumatoid arthritis, obesity, hyperinsulinemia, hypoinsulinemia or wounds.

## GENENTECH INC.

Kljavin Stewart Ferrara Goddard Ashkenazi AJ, Baker KP, Ferrara N, Filvaroff E, ÞΖ Godowski PJ, Kuo SS, Napi Tumas D, William KP, Botstein D, Desnoyers L, Eaton DL; E, Fong S, Gao W, Gerber H, Gerritse PJ, Grimaldi JC, Gurney AL, Hillan KJ; Napier MA, Pan J, Paoni NF, Roy MA, Williams PM, Wood WI; Gerritsen ME; Shelton

neuropathies polypeptide useful for treating peripheral neuropathy, or thies associated with systemic disease such as post-polio ired immunodeficiency syndrome-associated syndrome. syndrome

Example 114; SEQ ID NO 564; 459pp; English.

CC comprising the vector and producing PRO, a chimaeric molecule comprising the vector and producing PRO, a chimaeric molecule comprising CC antibody. PRO337 polypeptide is useful for detecting a PRO493 CC polypeptide. PRO735 polypeptide is useful for detecting a PRO4931 CC polypeptide. PRO735, PRO700 or PRO735 polypeptide is useful for detecting PRO337 CC polypeptide. PRO735 professing PRO4931 polypeptide is useful for detecting PRO335 polypeptide. PRO735 professing PRO337 polypeptide is useful for detecting CC profess professing PRO337 polypeptide is useful for linking a CC bioactive molecule to a cell expressing PRO337 polypeptide. The bioactive molecule is the toxin, radiolabel, or an antibody. The bioactive molecule to a cell expressing PRO337 polypeptide is useful for linking a bioactive molecule to a cell expressing PRO337 polypeptide is useful for linking a bioactive molecule to a cell expressing PRO337 polypeptide; PRO735 polypeptide are useful for linking a bioactive molecule to a cell expressing PRO337 polypeptide; PRO735 polypeptide is useful for linking a bioactive molecule to a cell expressing PRO337 polypeptide to a cell expressing PRO337 polypeptide or anti-PRO337 cc professing PRO337 polypeptide; PRO337 polypeptide is useful for modulating the cell expressing PRO337 polypeptide is useful for modulating the cell expressing PRO337 polypeptide is useful for modulating the professing PRO339 polypeptide is useful for modulating the cell expressing PRO337 polypeptide is useful for modulating the professing PRO339 polypeptide is useful for modulating the professing PRO339 polypeptide is useful for modulating the professing PRO337 polypeptide is useful for modulating the professing PRO339 polypeptide is useful for modulating the biological activity of the cell expressing PRO339 polypeptide; PRO700 or PRO739 polypeptide is useful for inhibiting tumour growth, retinal disorders, polypeptides are useful for inhibiting tumour growth, retinal disorders, cell polypeptide is useful for inhibiting tumour growt peptide, a PRO extracellular domain with or without its associated signestide). Also included are nucleic acids encoding the PRO proteins mentioned above, a vector comprising a PRO nucleic acid), a host cell ç ; ansmembrane protein) having at least 80% amino acid sequence identity an amino acid sequence as given an amino acid sequence as given the specification (including PRO lacking its associated signal ptide, a PRO extracellular domain with or without its associated signal relates to an isolated PRO polypeptide (secreted given

hypoinsulinemia or wounds New nucleic acid encoding a secreted and transmembrane polypeptide, useful for treating e.g. lung or breast tumors, osteoarthritis, rheumatoid arthritis, obesity, diabetes, hyperinsulinemia,

Example 114; SEQ ID NO 564; 461pp; English

The invention relates to an isolated PRO polypeptide (secreted or transmembrane protein) having at least 80% amino acid sequence identity to an amino acid sequence chosen from 94 fully defined sequences as given in the specification (including PRO lacking its associated signal peptide, a PRO extracellular domain with or without its associated signal compitated. Also included are nucleic acids encoding the PRO proteins mentioned above, a vector comprising a PRO nucleic acid), a host cell comprising the vector and producing PRO, a chimaeric molecule comprising PRO fused to a heterologous amino acid sequence, and an anti-PRO antibody. PRO337 polypeptide is useful for detecting a PRO493 polypeptide. Similarly, PRO493 polypeptide is useful for detecting PRO337 polypeptide is useful for detecting PRO337 polypeptide. Similarly, PRO493 polypeptide is useful for detecting PRO525, PRO700 or PRO339. PRO493 polypeptide is useful for detecting PRO525, PRO700 or PRO339. PRO493 polypeptide is useful for detecting a PRO493.

Goddard Kljavin Stewart AT'S'N Ð Godowski PJ, Kuo SS, Na Filvaroff E, Tumas D, KP, Botstein D, Desnoyers L, Eaton DL f E, Fong S, Gao W, Gerber H, Gerrits PJ, Grimaldi JC, Gurney AL, Hillan KJ Napier MA, Pan J, Paoni NF, Roy MA, Williams PM, Wood WI; Eaton DL; Gerritsen ME; ξ Shelton

## WPI; 2004-021078/02.

inflammation, organ infertility, birth d syndrome, or cancer. secreted and transmembrane nucleic acid useful for treating lammation, organ failure, atherosclerosis, cardiac injury, ertility, birth defects, premature aging, acquired immunodeficiency

Example 114; SEQ ID NO 564; 463pp; English.

CC transmembrane protein) having at least 80% amino acid sequence as given con a maino acid sequence chosen from 94 fully defined sequence as given con a maino acid sequence chosen from 94 fully defined sequence as given con the specification (including PRO lacking its associated signal spetide). Also included are nucleic acids encoding the pro proteins peptide). Also included are nucleic acids encoding the pro proteins comprising the vector and producing PRO, a chimaeric molecule comprising the vector and producing PRO, a chimaeric molecule comprising CC polypeptide in a sample suspected of containing PRO4933 polypeptide. Similarly, PRO4933 polypeptide is useful for detecting a PRO4933 polypeptide is useful for detecting PRO1559 polypeptide. PRO725, PRO700 or PRO739 polypeptide is useful for detecting PRO1559 polypeptide. PRO725, PRO700 or PRO739 polypeptide is useful for Inking a pro4953 polypeptide is the toxin, radiolabel, or an antibody. The bloactive molecule to a cell expressing PRO493 polypeptide is useful for linking a pro4953 polypeptide is useful for linking a pro4953 polypeptide is useful for linking a pro700 or PRO739 polypeptide is useful for linking a pro4953 polypeptide is useful for linking a pro4953 polypeptide is useful for linking a pro700 or PRO739 polypeptide are useful for linking a bloactive molecule to a cell expressing PRO493 polypeptide; and PRO1559 polypeptide is useful for modulating the pro735 polypeptide. PRO735 polypeptide is useful for modulating the bloactive molecule for anti-PRO337 polypeptide, where the cell is killed. PRO337 polypeptide is useful for modulating the bloactive pro735 polypeptide is useful for modulating the pro735 polypeptide is useful for modulating the bloactivity of the cell expressing PRO337 polypeptide is useful for modulating

The invention relates to an isolated PRO polypeptide (secreted or transmembrane protein) having at least 80% amino acid sequence identity to an amino acid sequence chosen from 94 fully defined sequences as given in the specification (including PRO lacking its associated signal peptide, a PRO extracellular domain with or without its associated signal peptide). Also included are nucleic acids encoding the PRO proteins mentioned above, a vector comprising a PRO nucleic acid), a host cell comprising the vector and producing PRO, a chimaeric molecule comprising PRO fused to a heterologous amino acid sequence, and an anti-PRO antibody, PRO337 polypeptide is useful for detecting a PRO4993 polypeptide in a sample suspected of containing PRO4993 polypeptide.
                                                                                                                                                                                                                                                                                                          Novel PRO polypeptides useful for treating diabetes, kidney disorders (Berger disease, celiac disease), pericyte-associated tumors, anemia, arthritis, cardiac insufficiency disorders, treating peripheral neuropathy.
                                                                                                                                                                                                                                                                   Example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  (GETH

                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to an isolated PRO polypeptide (secreted or transmembrane protein) having at least 80% amino acid sequence identity to an amino acid sequence chosen from 94 fully defined sequences as given in the specification (including PRO lacking its associated signal peptide, a PRO extracellular domain with or without its associated signal peptide). Also included are nucleic acids encoding the PRO proteins mentioned above, a vector comprising a PRO nucleic acid), a host cell comprising the vector and producing PRO, a chimaeric molecule comprising PRO fused to a heterologous amino acid sequence, and an anti-PRO antibody. PRO337 polypeptide in useful for detecting a PRO4993 polypeptide. Similarly, PRO4993 polypeptide is useful for detecting PRO493 polypeptide.

                                                                                                                                                                                                                                                Ct transmembrane protein) having at least to by amino acid sequence identity
Ct to an amino acid sequence chosen from 94 fully defined sequences as given
Ct on the specification (including PRO lacking its associated signal
Ct peptide). Also included are nucleic acids enquences as given
Ct peptide). Also included are nucleic acids encoding the PRO proteins
Ct mentioned above, a vector comprising a PRO uncleic acid), a host cell
Ct comprising the vector and producing PRO. a chimaeric molecule comprising
Ct PRO fissed to a heterologous amino acid sequence, and an anti-PRO
Ct polypeptide in a sample suspected of containing PRO493 polypeptide.
Ct Similarly, PRO493 polypeptide is useful for detecting PRO337
Ct polypeptide. PRO725, PRO700 or PRO739 polypeptide is useful for detecting PRO337
Ct polypeptide, and PRO1559 polypeptide is useful for detecting PRO337
Ct polypeptide to a cell expressing PRO337 polypeptide. The bioactive molecule
Ct auses death of the cell. PRO337 polypeptide is useful for linking a bioactive molecule to a cell expressing PRO337 polypeptide. PRO725, PRO700 or PRO739 polypeptide polypeptide is useful for linking a bioactive molecule to a cell expressing PRO393 polypeptide is useful for linking a bioactive molecule to a cell expressing PRO393 polypeptide is useful for linking a bioactive molecule to a cell expressing PRO393 polypeptide is useful for linking a bioactive molecule to a cell expressing PRO35, PRO700 or PRO739 polypeptide. PRO4993 polypeptide or anti-PRO37,
Ct polypeptide is useful for modulating the biological activity of the cell expressing PRO337
Ct polypeptide and PRO1559 polypeptide is useful for modulating the polypeptide. PRO337
Ct polypeptide is useful for modulating the biological activity of the cell expressing PRO355
Ct pro700 or PRO739 polypeptide problems, articular cartilage defects,
Ct polypeptides are useful for modulating the biological activity 
                                                                                                                                                                           Query Match

                                                                                                                                                                                                                                                                                                                   The invention relates to an isolated PRO polypeptide (secreted or transmembrane protein) having at least 80% amino acid sequence identity to an amino acid sequence chosen from 94 fully defined sequences as given in the specification (including PRO lacking its associated signal peptide, a PRO extracellular domain with or without its associated signal peptide). Also included are nucleic acids encoding the PRO proteins mentioned above, a vector comprising a PRO nucleic acid), a host cell comprising the vector and producing PRO, a chimaeric molecule comprising PRO fused to a heterologous amino acid sequence, and an anti-PRO antibody. PRO337 polypeptide is useful for detecting a PRO4993 polypeptide. Similarly, PRO4993 polypeptide is useful for detecting PRO337
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New PRO polypeptides PRO200, PRO322, PRO540, PRO846 and PRO617 that enhance the survival/proliferation of rod photoreceptor cells, useful treating retinal disorders or injuries e.g., sight loss in mammals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   WPI;

CC peptide). Also included are nucleic acids encoding the PRO proteins CC mentioned above, a vector comprising a PRO nucleic acid), a host cell comprising the vector and producing PRO, a chimaeric molecule comprising CC PRO fused to a heterologous amino acid sequence, and an anti-PRO CC antibody, PRO37 polypeptide is useful for detecting PRO4993 polypeptide in a sample suspected of containing PRO4993 polypeptide. CC Similarly, PRO4993 polypeptide is useful for detecting PRO337 polypeptide. PRO7725, PRO700 or PRO739 polypeptide is useful for detecting PRO337 polypeptide. PRO7725, PRO700 or PRO739 polypeptide is useful for detecting PRO337 polypeptide. PRO7725, PRO700 or PRO739 polypeptide is useful for linking a CC bloactive molecule to a cell expressing PRO337 polypeptide is useful for linking a CC bloactive molecule to a cell expressing PRO4993 polypeptide is useful for linking a CC bloactive molecule to a cell expressing PRO159 polypeptide; and PRO159 polypeptide is useful for linking a CC useful for linking a bloactive molecule to a cell expressing PRO159 polypeptide; and PRO159 polypeptide is useful for linking a bloactive molecule to a cell expressing PRO725, CC PRO700 or PRO739 polypeptide. PRO4993 polypeptide or anti-PRO337 CC polypeptide is useful for modulating at least one biological activity of the cell expressing PRO537 polypeptide; PRO790 or PRO337 polypeptide is useful for modulating the cell expressing PRO337 polypeptide is useful for modulating the cell expressing PRO337 polypeptide is useful for modulating the polypeptide; PRO725, CC pro700 or PRO739 polypeptide or an anti-PRO337 polypeptide; PRO725, CC polypeptide; and PRO1559 polypeptide is useful for modulating the cell expressing PRO355 polypeptide is useful for modulating the profile is useful for modulating profile is useful for modulating the profile is useful for modulating profile is useful for modulating profile is useful for

                                                                                                                                            The invention relates to an isolated PRO polypeptide (secreted or transmembrane protein) having at least 80% amino acid sequence identity to an amino acid sequence chosen from 94 fully defined sequences as given in the specification (including PRO lacking its associated signal peptide, a PRO extracellular domain with or without its associated signal peptide). Also included are nucleic acids encoding the PRO proteins mentioned above, a vector comprising a PRO nucleic acid), a host cell comprising the vector and producing PRO, a chimaeric molecule comprising PRO fused to a heterologous amino acid sequence, and an anti-PRO antibody, PRO337 polypeptide is useful for detecting a PRO4993 polypeptide in a sample suspected of containing PRO4993 polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                        New nucleic acid encoding a secreted and transmembrane polypeptide, useful for treating e.g. lung or breast tumors, osteoarthritis, rheumatoid arthritis, obesity, diabetes, hyperinsulinemia, hypoinsulinemia or wounds.
                                                                                                                                                                                                                                                                                                                                                                                                                  Example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                (GETH

             The invention relates to an isolated PRO polypeptide (secreted or CC transmembrane protein) having at least 80% amino acid sequence identity con an amino acid sequence chosen from 94 fully defined sequences as given con the specification (including PRO lacking its associated signal peptide). Also included are nucleic acids encoding the PRO proteins comprising a production without its associated signal comprising the vector comprising a PRO nucleic acid), a host cell comprising the vector and producing PRO, a chimaeric molecule comprising PRO fused to a heterologous amino acid sequence, and an anti-PRO continued. PRO337 polypeptide is useful for detecting PRO4993 polypeptide is useful for detecting PRO4993 polypeptide is useful for detecting PRO4993 polypeptide. CC Similarly, PRO4993 polypeptide is useful for detecting PRO735, PRO700 or PRO739 polypeptide is useful for detecting PRO725, PRO700 or PRO739 polypeptide is useful for detecting PRO725, PRO700 or PRO739 polypeptide is useful for linking a CC polypeptide is the toxin, radiolabel, or an antibody. The bioactive molecule to a cell expressing PRO337 polypeptide. The bioactive molecule con a cell expressing PRO337 polypeptide is useful for linking a CC pRO700 or PRO739 polypeptide are useful for linking a bioactive molecule con a cell expressing PRO355 polypeptide; and PRO1559 polypeptide is useful for linking a bioactive molecule con a cell expressing PRO725, polypeptide is useful for linking a bioactive molecule con a cell expressing PRO725, polypeptide is useful for linking a bioactive molecule con a cell expressing PRO725, polypeptide is useful for linking a bioactive molecule con a cell expressing PRO725, polypeptide is useful for linking a bioactive molecule con a cell expressing PRO725, polypeptide is useful for linking a bioactive molecule con a cell expressing PRO725, polypeptide is useful for modulating at least one biological activity of colypeptide is useful for modulating at least one biological activity of polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        25-AUG-1999;

PRO337 polypeptide or anti-PRO4933 polypeptide is useful for modulating the biological activity of the cell expressing PRO4933 polypeptide; PRO725, PRO700 or PRO739 polypeptide or an anti-PRO1559 polypeptide is useful for modulating the biological activity of the cell expressing PRO700 or anti-PRO735 polypeptide or anti-PRO725, anti-PRO700 or anti-PRO739 polypeptide is useful for modulating the biological activity of the cell expressing PRO725, PRO700 or PRO739 polypeptide is useful for modulating the biological activity of the cell expressing PRO725, PRO700 or PRO739 polypeptide. The polypeptides are useful for inhibiting tumour growth, retinal disorders, sports-related joint problems, articular cartilage defects, osteonarthrits or rheumatoid arthrits, wound healing and hearing loss in mammals. The present sequence is a Tagman PCR probe used investigate PRO

Ferrara Goddard Kljavin Stewart ĮŲ, i AJ, Baker KP, N, Filvaroff E, A, Godowski PJ, IJ, Kuo SS, Nap TA, Tumas D, Wi KP, Botstein D, Des Ef E, Fong S, Gao W, I PJ, Grimaldi JC, Gu Napier MA, Pan J, Napier MA, Wood Wood WI; Desnoyers L, Eaton DL; W, Gerber H, Gerritsen ME; Gurney AL, Hillan KJ; J, Paoni NF, Roy MA, Shelt Shelton ĮΙ,

diagnosing nucleic acid, useful for manufacturing a medicament ing or treating tumor or for tissue typing.

114; SEQ ID NO 564; 454pp; English

CC in the specification (including PRO lacking the associated signal CC peptide, a PRO extracellular domain with or without its associated signal CC peptide). Also included are nucleic acids encoding the PRO proteins CC mentioned above, a vector comprising a PRO nucleic acid), a host cell comprising the vector and producing PRO, a chimaeric molecule comprising CC PRO fused to a heterologous amino acid sequence, and an anti-PRO CC antibody. PRO337 polypeptide is useful for detecting a PRO4993 polypeptide. PRO725, PRO700 or PRO739 polypeptide is useful for detecting a PRO4993 polypeptide. PRO725, PRO700 or PRO739 polypeptide is useful for detecting CC PRO1559 polypeptide, and PRO4993 polypeptide is useful for detecting CC PRO1559 polypeptide, and PRO4993 polypeptide is useful for detecting CC PRO725, PRO700 or PRO739. PRO4993 polypeptide is useful for detecting CC PRO725, PRO700 or PRO739. PRO4993 polypeptide is useful for linking a CC Dioactive molecule to a cell expressing PRO337 polypeptide. The bioactive molecule couses death of the cell. PRO337 polypeptide is useful for linking a CC PRO700 or PRO739 polypeptide are useful for linking a bioactive molecule to a cell expressing PRO493 polypeptide; and pRO1559 polypeptide is useful for linking a bioactive molecule to a cell expressing PRO725, CC PRO700 or PRO739 polypeptide. PRO725, CC PRO700 or PRO739 polypeptide. PRO337 polypeptide or anti-PRO337 CC polypeptide or anti-PRO493 polypeptide is useful for modulating the biological activity of the cell expressing PRO4939 polypeptide is useful for modulating the biological activity of the cell expressing PRO4939 polypeptide is useful for CC PRO739 polypeptide is useful for modulating the biological activity of the cell expressing PRO725, PRO700 or PRO739 polypeptide is useful for modulating the biological activity of the cell expressing PRO4939 polypeptide. PRO725, CC PRO700 propeptide is useful for modulating the biological activity of the cell expressing PRO4939 polypeptide. The professing PRO4930 polypeptide. The invention relates to an isolated PRO polypeptide (secreted or namembrane protein) having at least 80% amino acid sequence identity an amino acid sequence chosen from 94 fully defined sequences as given amplification The present sequence is a Taqman PCR probe lification in certain tumour cell lines.

New PRO nucleic acid, udiagnosing or treating acid, useful reating tumor for f c manufacturing a l a medicament

Example 114; SEQ ID NO 564; 453pp; English.

The invention relates to an isolated PRO polypeptide (secreted or curansmembrane protein) having at least 80% amino acid sequence identity to an amino acid sequence chosen from 94 fully defined sequences as given in the specification (including PRO lacking its associated signal peptide). Also included are nucleic acids encoding the proteins comprising the vector comprising a PRO nucleic acid), a host cell comprising the vector and producing PRO, a chimaeric molecule comprising PRO nucleic acid), a host cell comprising the vector and producing PRO, a chimaeric molecule comprising PRO nucleic acid), a host cell comprising the vector and producing PRO, a chimaeric molecule comprising PRO nucleic acid), a host cell comprising the vector and producing PRO, a chimaeric molecule comprising PRO nucleic acid sequence, and an anti-PRO continued and producing PRO, a chimaeric molecule comprising PRO nucleic acid sequence, and an anti-PRO continued producing PRO nucleic acid sequence, and an anti-PRO continued producing PRO nucleic sequence, and an anti-PRO continued producing PRO nucleic sequence, and an anti-PRO continued producing PRO nucleic sequence, and producing PRO nucleic sequence appoint producing PRO nucleic sequence and p

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                र्
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CC bioactive molecule to a cell expressing PRO4993 polypeptide; PRO725, CC PRO700 or PRO739 polypeptide are useful for linking a bioactive molecule cto a cell expressing PRO1559 polypeptide; and PRO1559 polypeptide is useful for linking a bioactive molecule to a cell expressing PRO725, CC PRO700 or PRO739 polypeptide. PRO4993 polypeptide or anti-PRO337 CC polypeptide is useful for modulating at least one biological activity of the cell expressing PRO725, CC pro700 or PRO739 polypeptide or anti-PRO493 polypeptide is useful for modulating the CC pro700 or PRO739 polypeptide or an anti-PRO493 polypeptide; RRO337 CC pro700 or PRO739 polypeptide or an anti-PRO493 polypeptide; RRO357 CC pro700 or PRO739 polypeptide or an anti-PRO7559 polypeptide is useful for modulating the biological activity of the cell expressing PRO755, CC pro709 polypeptide is useful for modulating the biological activity of the cell expressing PRO7559 polypeptide anti-PRO759 polypeptide is useful for modulating the biological activity of the cell expressing PRO559 polypeptide or anti-PRO700 or anti-PRO739 polypeptide is useful for modulating the biological activity of the cell expressing PRO559 polypeptide or anti-PRO7039 polypeptide. The CC pro799 polypeptide is useful for inhibiting tumour growth, retinal disorders, contracted for the cell expressing PRO755, articled activity of the cell expressing PRO755, articled for the cell expressing PRO755, pro700 or PRO739 polypeptide. The growth, retinal disorders, contracted for the cell expressing PRO755, pro700 or PRO739 polypeptide. The growth, retinal disorders, contracted for the cell expressing PRO755, pro700 or PRO739 polypeptide. The prosent sequence is a Tagman PCR probe used investigate PRO contracted and profile and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to an isolated PRO polypeptide (secreted or transmembrane protein) having at least 80% amino acid sequence identity to an amino acid sequence chosen from 94 fully defined sequences as given in the specification (including PRO lacking its associated signal peptide, a PRO extracellular domain with or without its associated signal peptide). Also included are nucleic acids encoding the PRO proteins mentioned above, a vector comprising a PRO nucleic acid), a host cell comprising the vector and producing PRO, a chimaeric molecule comprising PRO fused to a heterologous amino acid sequence, and an anti-PRO antibody. PRO317 polypeptide is useful for detecting a PRO493 polypeptide is useful for detecting a PRO493 polypeptide is useful for detecting PRO337
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               20-NOV-2003
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              11-MAR-2004
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ADG48865;

Stewart TA,
The invention relates to an isolated PRO polypeptide (secreted or transmembrane protein) having at least 80% amino acid sequence id to an amino acid sequence chosen from 94 fully defined sequences in the specification (including PRO lacking its associated signal peptide, a PRO extracellular domain with or without its associate
                                                                                                                                                     New PRO polypeptide useful for treating peripheral neuropathy, neuropathies associated with systemic disease such as post-polio or acquired immunodeficiency syndrome-associated syndrome.
                                                                                                                                                                                                                                      WPI;
                                                                                                                                                                                                                                                                                                                                                                                            (GETH

The invention relates to an isolated PRO polypeptide (secreted or transmembrane protein) having at least 80% amino acid sequence identity to an amino acid sequence chosen from 94 fully defined sequences as given in the specification (including PRO lacking its associated signal peptide, a PRO extracellular domain with or without its associated signal peptide). Also included are nucleic acids encoding the PRO proteins mentioned above, a vector comprising a PRO nucleic acid), a host cell comprising the vector and producing PRO, a chimaeric molecule comprising
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                peptide). Also included are nucleic acids encoding the PRO proteins mentioned above, a vector comprising a PRO nucleic acid), a host cel comprising the vector and producing PRO, a chimaeric molecule comprising the vector and producing PRO, a chimaeric molecule compris PRO fused to a heterologous amino acid sequence, and an anti-PRO antibody. PRO337 polypeptide is useful for detecting a PRO4993 polypeptide in a sample suspected of containing PRO4993 polypeptide. Similarly, PRO4993 polypeptide is useful for detecting PRO337
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ophthalmological; antiarthritic; osteopathic; antirheumatic; vulnerary; auditory; tumour growth; retinal disorder; sports-related joint problem articular cartilage defects; osteoarthritis; rheumatoid arthritis;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CC pRO fused to a heterologous amino acid sequence, and an anti-PRO CC antibody. PRO337 polypeptide is useful for detecting a PRO4993 containing PRO4993 polypeptide. Similarly, PRO4993 polypeptide is useful for detecting PRO337 CC polypeptide. PRO725, PRO700 or PRO739 polypeptide is useful for detecting PRO337 polypeptide, and PRO1559 polypeptide is useful for detecting PRO355, PRO700 or PRO739 pRO4939 polypeptide is useful for detecting PRO355, PRO700 or PRO739 pRO4939 polypeptide is useful for linking a CC professing PRO337 polypeptide. The bioactive molecule to a cell expressing PRO337 polypeptide. The bioactive molecule to a cell expressing PRO493 polypeptide is useful for linking a CC pro700 or PRO739 polypeptide are useful for linking a polypeptide or anti-PRO725, PRO700 or PRO739 polypeptide are useful for linking a cC useful for linking a bioactive molecule to a cell expressing PRO725, PRO700 or PRO739 polypeptide. PRO493 polypeptide or anti-PRO337 CC polypeptide is useful for modulating at least one biological activity of the cell expressing PRO725, PRO700 or PRO739 polypeptide. PRO493 polypeptide or anti-PRO337 CC polypeptide or anti-PRO493 polypeptide is useful for modulating the biological activity of the cell expressing PRO725, PRO700 or PRO739 polypeptide or anti-PRO159 polypeptide; and PRO1559 polypeptide or anti-PRO159 polypeptide; and PRO1559 polypeptide or anti-PRO1559 polypeptide; and PRO1559 polypeptide or anti-PRO725, anti-PRO700 or anti-PRO739 polypeptide or anti-PRO725, anti-PRO700 or anti-PRO739 polypeptide is useful for modulating the biological activity of the cell expressing PRO700 or anti-PRO739 polypeptide. The polypeptide is useful for modulating the biological activity of the cell expressing PRO700 or PRO739 polypeptide. The polypeptide or anti-PRO739 polypeptide. The polypeptide or anti-PRO730 polypeptide. 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

                                                                                                                                                                                                                                                      CC transmembrane protein) having at least 80% amino acid sequence identity CC to an amino acid sequence chosen from 94 fully defined sequences as given CC in the specification (including PRO lacking its associated signal captide). Also included are nucleic acids encoding the RO proteins comprising the vector and producing PRO acking its associated signal CC peptide). Also included are nucleic acids encoding the PRO proteins comprising a PRO nucleic acid; a bost cell comprising the vector and producing PRO, a chimaeric molecule comprising CC pRO fused to a heterologous amino acid sequence, and an anti-PRO CC similarly, PRO493 polypeptide is useful for detecting a PRO493 polypeptide. Similarly, PRO493 polypeptide is useful for detecting PRO337 CC similarly, PRO493 polypeptide is useful for detecting PRO337 CC similarly, PRO493 polypeptide is useful for detecting PRO493 polypeptide. PRO700 or PRO739. PRO700 or PRO739 polypeptide is useful for detecting PRO337 CC polypeptide is the toxin, radiolabel, or an antibody. The bioactive molecule to a cell expressing PRO337 polypeptide is useful for linking a bioactive molecule to a cell expressing PRO493 polypeptide. The bioactive molecule is useful for linking a bioactive molecule is useful for linking a bioactive molecule is useful for linking a bioactive molecule co a cell expressing PRO493 polypeptide. The bioactive molecule co a cell expressing PRO493 polypeptide is useful for linking a bioactive molecule co a cell expressing PRO725, pro700 or PRO739 polypeptide are useful for linking a bioactive molecule co a cell expressing PRO493 polypeptide; PRO725, cc polypeptide is useful for modulating the biological activity of the cell expressing PRO337 polypeptide is useful for modulating the pro725, pro700 or PRO739 polypeptide is useful for modulating the pro725, pro700 or an anti-PRO725, pro700 or an anti-PRO725, pro700 or anti-PRO700 or 
                                                                                                                                                                                                                                      밁
                                                                                                                                                                                 Query Match

The invention relates to an isolated PRO polypeptide (secreted or curansmembrane protein) having at least 80% amino acid sequence identity con a maino acid sequence chosen from 94 fully defined sequence angiven con in the specification (including PRO lacking its associated signal peptide). Also included are nucleic acids encoding the PRO proteins comprising the vector and producing PRO, a chimaeric molecule comprising the vector and producing PRO, a chimaeric molecule comprising the vector and producing PRO, a chimaeric molecule comprising comprising the vector and producing PRO, a chimaeric molecule comprising comprising the vector and producing PRO, a chimaeric molecule comprising comprising the vector and producing PRO, a chimaeric molecule comprising comprising the vector and producing PRO, a chimaeric molecule comprising comprising the vector and producing PRO, a chimaeric molecule comprising produced p
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel secreted and transmembrane PRO polypeptides useful for treating diabetes, kidney disorders (Berger disease, celiac disease), pericyteassociated tumors, arthritis and cardiac insufficiency disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              2004-090107/09.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             IJ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       564; 458pp; English.

Human PRO 362 Taqman PCR probe.

Human; ss; PCR; secreted protein; transmembrane protein; PRO; cytostatic; ophthalmological; antiarthritic; osteopathic; antirheumatic; vulnerary; auditory; tumour growth; retinal disorder; sports-related joint problem; articular cartilage defects; osteoarthritis; rheumatoid arthritis; wound healing; hearing loss; probe; in situ hybridisation.

```
Critical invention relates to an isolated PRO polypeptide (secreted or citransmembrane protein) having at least 80% amino acid sequence identity con an amino acid sequence chosen from 94 fully defined sequences as given critical in the specification (including PRO lacking its associated signal peptide). Also included are nucleic acids encoding the PRO proteins comprising a PRO nucleic acid), a bost cell comprising a PRO nucleic acid), a bost cell comprising the vector and producing PRO. a chimaeric molecule comprising PRO issed to a heterologous amino acid sequence, and an anti-PRO polypeptide is useful for detecting a PRO. Similarly, PRO493 polypeptide is useful for detecting PRO337 polypeptide. Similarly, PRO493 polypeptide is useful for detecting PRO337 polypeptide. PRO700 or PRO739. PRO700 or PRO739 polypeptide is useful for detecting PRO337 polypeptide. PRO700 or PRO739. PRO4933 polypeptide is useful for detecting PRO337 polypeptide. PRO700 or PRO739. PRO4933 polypeptide is useful for detecting PRO337 polypeptide. The bioactive molecule to a cell expressing PRO337 polypeptide. The bioactive molecule to a cell expressing PRO337 polypeptide. The bioactive molecule to a cell expressing PRO337 polypeptide. The bioactive molecule is useful for linking a bioactive molecule to a cell expressing PRO339 polypeptide. The bioactive molecule co a cell expressing PRO739 polypeptide are useful for linking a bioactive molecule co a cell expressing PRO739 polypeptide. PRO735 polypeptide is useful for modulating the biological activity of the cell expressing PRO337 polypeptide. Where the cell is pro337 polypeptide. PRO337 polypeptide is useful for modulating the properide is useful for modulating the properide is useful for modulating the properide. PRO735 polypeptide or an anti-PRO339 polypeptide or anti-PRO339 polypeptide or anti-PRO339 polypeptide or anti-PRO339 polypeptide is useful for modulating the properide. The promator of the cell expressing PRO359 polypeptide or anti-PRO359 polypeptide. The promator of the cell

The invention relates to an isolated PRO polypeptide (secreted or cransmembrane protein) having at least 80% amino acid sequence identity crown an amino acid sequence chosen from 94 fully defined sequences as given cin the specification (including PRO lacking its associated signal competide, a PRO extracellular domain with or without its associated signal epitide, a PRO extracellular domain with or without its associated signal competide, a PRO extracellular domain with or without its associated signal epitide. Also included are nucleic acids encoding the PRO proteins comprising the vector comprising a PRO nucleic acid), a host cell comprising the vector and producing PRO, a chimaeric molecule comprising comprising a PRO 1000 a chimaeric molecule comprising produced from the protection of the comprising produced and producing produced and an anti-PRO 200 antibody. PRO337 polypeptide is useful for detecting produced p

The invention relates to a class of CpG immunostimulatory oligonucleotides containing a 5'TCG motif or a CG at or the 5' end that are useful for stimulating an immune response. Oligonucleotides and compositions of the invention are useful for treating allergy or asthma, viral and bacterial infections and cancer e.g. biliary tract cancer, breast cancer, cervical cancer, choriocarcinoma, colon cancer, endometrial cancer, gastric cancer, lymphomas, intraepithelial neoplasms, liver cancer, lung cancer (e.g. small cell and non-small cell), melanoma, neuroblastomas, ovarian cancer, pancreatic cancer, prostate cancer,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   PRO739 polypeptide is useful for modulating the biological activity of the cell expressing PRO725, PRO700 or PRO739 polypeptide. The polypeptides are useful for inhibiting tumour growth, retinal disorders, sports-related joint problems, articular cartilage defects, osteoarthritis or rheumatoid arthritis, wound healing and hearing loss in mammals. The present sequence is a Tagman PCR probe used investigate PRO gene amplification in certain tumour cell lines.
                                                                                                                                                                                                                                                                                                                                                            New oligonucleotides, useful for treating allergy or asthma, bacterial infections, and cancer, e.g. biliary tract cancer,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      11-DEC-2002; 2002US-0432409P

CC clamping method (M1), which can be used for detecting the presence of CC clamping method (M1), which can be used for detecting the presence of CC enjusing a poptide polymorphisms (SNPs) in a target gene. (M1) comprises: CC (a) using a peptide nucleic acid (PNA) probe having a reverse CC complementary strand sequence of a partial sequence containing one or CC mutant target DNA; (b) a primer set containing a lower primer having a CC reverse complementary strand sequence of a partial sequence containing CC one or more mutations in the sense strand of a mutant or a wild-type of a cc rarget DNA or a partial sequence of a vicinity like the one base mutation and (C) and an upper primer having a reverse complementary strand sequence of a partial sequence of a vicinity compartial sequence of a mutant or a wild-type target DNA or a partial sequence of a partial sequence of a mutant or a wild-type target DNA or a partial sequence of a vicinity compartial sequence of a mutant or a wild-type target DNA or a partial sequence of a vicinity compartial sequence of a partial sequence in the 3' region of the partial sequence containing one or more mutations in the sense of a partial sequence in compartial sequence of a partial sequence in the sense strand of a mutant or a wild-type target DNA. (M1) is sensitive and accurate in detecting the presence of SNPs in a target gene. (M1) is carget gene. The present sequence represents a primer used in an aldehyde
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  rectal cancer, sarcomas, thyroid cancer, renal cancer, bone cancer, and CNS cancer, connective tissue cancer, ossophageal cancer, eye candidation of the cancer, cancer, skin cancer, testicular cancer, as well as other carcinomas and sarcomas. The invention is also useful in gene therapy. The present sequence is a immunostimulatory oligonucleotide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  polymerase chain reaction clamping; PCR clamping; detection; single nucleotide polymorphism; SNP; peptide nucleic acid pr PNA probe; mutation; aldehyde dehydrogenase II; ALDH2; prime
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Polymerase chain reaction clamping for improved detection of the presence of single nucleotide polymorphisms in a target gene, comprises using a peptide nucleic acid probe, and a primer set containing lower and upper

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          S
Sequences AAH37205 - AAH40944 represent PCR primers, single nucleotide CC primer extension (SNPE) primers, and the sequences of regions flanking CC sites of single nucleotide polymorphisms SNPs. The present invention CC includes kits for determining the presence or absence of a SNP, using the coligonucleotides of the invention. The PCR primers are used to amplify a CSNP flanking sequence, the SNPE primer is used as a genotyping primer. CC performing a single-nucleotide primer extension reaction. The coligonucleotides are useful for genotyping a nucleic acid sample by performing a single-nucleotide primer extension reaction. The CC oligonucleotides are useful for determining the presence, absence or cidentity of a SNP and for genotyping nucleic acid samples, for e.g. to CC assess by association analysis the genotypic trait suspected of being CC caused by one or more SNPs. Phenotypic traits include diseases e.g. CC dystrophy, familial hypercholesterolaemia, polycystic kidney disease, osteogenesis imperfecta and acute intermittent porphyria. Phenotypic C traits also include symptoms of or susceptibility to multifactorial CC traits also include symptoms of or may be genetic such as autoimmune CC disease of which a component is or may be genetic such as autoimmune CC inflammation, cancer, nervous system diseases and infection by pathogenic coliginates and acceptability to multifactorial coliginates in the coliginate of th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches

                                                                          Query Match
                                                                                                                                                                         The present invention describes nucleic acid molecules which modulate the synthesis, expression and/or stability of a mRNA encoding 1 or more receptors of vascular endothelial growth factor (VEGF). A patient (preferably human) having a condition associated with the level of the fms-like tyrosine kinase 1 (flt-1), kinase insert domain containing receptor (KDR) and/or foetal liver kinase in (flk-1) (e.g. tumour angiogenesis, ocular diseases, psoriasis and rheumatoid arthritis) can be treated by administering the nucleic acid molecule or the expression vector to the patient. AAX67275 to AAX75752 represent specific examples of nucleic acid molecules from the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        microorganism. The method is also useful in forensic investigations and paternity analysis. The present sequence represents a single nucleotide primer extension (SNPE) primer specific for a human SNP containing DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           (RIBO-)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   KDR; hammerhead ribozyme; hairpin ribozyme; cleavage; tumour angiogenesis; psoriasis; rheumatoid arthritis; ocular disease; tems-like tyrosine kinase 1; kinase insert domain containing receptor;

                                                                                                                                                                                                                                                                                                       The present invention describes nucleic acid molecules which modulate the synthesis, expression and/or stability of a mRNA encoding 1 or more receptors of vascular endothelial growth factor (VEGP). A patient (preferably human) having a condition associated with the level of the fms-like tyrosine kinase 1 (flt-1), kinase insert domain containing receptor (KDR) and/or foetal liver kinase 1 (flk-1) (e.g. tumour angiogenesis, ocular diseases, psoriasis and rheumatoid arthritis) can be treated by administering the nucleic acid molecule or the expression vector to the patient. AAX67275 to AAX75752 represent specific examples of nucleic acid molecules from the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Nucleic acid molecule modulating VEGF receptor(s) gene expression or stability - useful for treating e.g. tumour angiogenesis, psoriasis, rheumatoid arthritis, etc., in a human patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Vascular endothelial growth factor receptor; VBGF receptor; flt-1; flk-1; KDR; hammerhead ribozyme; hairpin ribozyme; cleavage; tumour anglogenesis; psoriasis; rheumatoid arthritis; ocular disease; fms-like tyrosine kinase 1; kinase insert domain containing receptor;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            26-OCT-1995;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence is an example of a poly-glutamine triplet repeat region found in exon 1 of the Huntington's disease (HD) gene. In an example from the invention, neuronal PC12 cells were engineered to include an HD gene exon 1 containing this sequence. These cells were used to demonstrate the ability of a single-stranded, phosphorothioate-modified oligonucleotide, HDA3T/53 (see ABZ81736) having a mismatch with respect to the HD gene, to convert a CAG triplet to CTG in HD gene exon 1, and to reduce the formation of Huntington's protein (huntingtin) aggregates. HDA3T/53 is an example of oligonucleotides of the invention that target sequence alterations to the triplet repeat region of the HD
                                                                                                                                                                                                                                                                                   18-DEC-2003
                                                                                                                                                                                                                                                                                                                                          ADC37821,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 17 BP; 9 A; 5 C; 3 G; 0 T; 0 U; 0 Other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Example 2; Page 61; 133pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New single stranded oligonucleotides comprising a DNA domain having least one mismatch with respect to the genetic sequence of the Huntington's disease gene to be altered, useful for treating or preventing Huntington's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            07-AUG-2001; 2001US-0310757P

The AMLP1 protein, nucleic acid molecules, antibodies, and compositions of the present invention can be used for treating or preventing a disorder associated with decreased or increased expression or activity of AMLP1. The present sequence represents a scanning
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated nucleic acid molecule encoding a human angiomotin-like protein, useful for treating or preventing a disorder associated with decreased or increased expression or activity of AMLP1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Shannon M,

                                                     Query Match
                                                                                                                                                                                          The present invention describes the human angiomotin-like protein 1 (AMLP1): human AMLP1 has cycostatic activity, and can be used in gene therapy. The AMLP1 protein, nucleic acid molecules, antibodies, and compositions of the present invention can be used for treating or preventing a disorder associated with decreased or increased expression or activity of AMLP1. The present sequence represents a geanning oligonucleotide for human AMLP1a, which is used in an example from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes the human angiomotin-like protein 1 (AMLP1). human AMLP1 has cytostatic activity, and can be used in gene therapy. The AMLP1 protein, nucleic acid molecules, antibodies, and compositions of the present invention can be used for treating or preventing a disorder associated with decreased or increased expression or activity of AMLP1. The present sequence represents a scanning obligonucleotide for human AMLP1a, which is used in an example from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New isolated nucleic acid molecule encoding a human angiomotin-like protein, useful for treating or preventing a disorder associated widecreased or increased expression or activity of AMLP1.
                                                                                                                                                                                                                                                                                                                                                                                                                          Example 2; SEQ ID NO 169; 172pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   WPI; 2003-430501/40.
